Proposed Title	:	Pizza Hut Pizzazz App
Project Synopsis/ Simple Description	:	A mobile application for customers of all ages - especially of ages 18 to 40 - to make online orders, track food preparation and delivery status as well as earn loyalty points through engaging mini games.
Problem statement/ Motivation	:	Pizza Hut's current app is cluttered, confusing, and overloaded with promotion banners, making ordering a chore. It lacks third-party order integration, so users can't track food ordered elsewhere. There's also no engaging reason to return. Customers aged 18–40 want fast, seamless, and fun — the app delivers none of that.
Research on Selected Themes	:	Food and Beverage
Project's Objectives	:	To improve existing Pizza Hut mobile application to increase user purchasing and ordering experience, to firstly smooth the online purchasing and ordering experience, and secondly to increase customers' loyalty and retention via loyalty programs, and increasing app usage retention via personalized messages (e.g. birthday wishes) and customized but still up-to-date promotions.
Project's Main Task	:	Redesign the UI/UX for simple, intuitive navigation. Integrate third-party food ordering platforms for unified order tracking. Build real-time food preparation and delivery status tracking. Develop engaging mini-games to earn loyalty points. Implement a loyalty points system tied to orders and games.
Project's Outcome/ Deliverable	:	A clean, user-friendly mobile app for all ages (focus: 18–40). Seamless order tracking across in-app and third-party orders. Increased user engagement through gamified loyalty. Higher customer retention and repeat orders. Stronger brand connection within Pizza Hut's own ecosystem.

<tr><td>Courseware References</td><td>:</td><td><table><tr><td>App</td><td>Strengths</td><td>Weaknesses</td></tr><tr><td>Current Pizza Hut App</td><td>- Established brand recognition
- Existing menu and ordering system
- Basic loyalty/rewards feature
- Nationwide outlet coverage</td><td>- Cluttered, confusing UI
- Too many promotion banners
- No third-party order tracking
- Poor navigation
- No engaging /interactive features
- Low retention among</td></tr></table></td></tr>
</table>

				- Familiar to existing users	younger users	

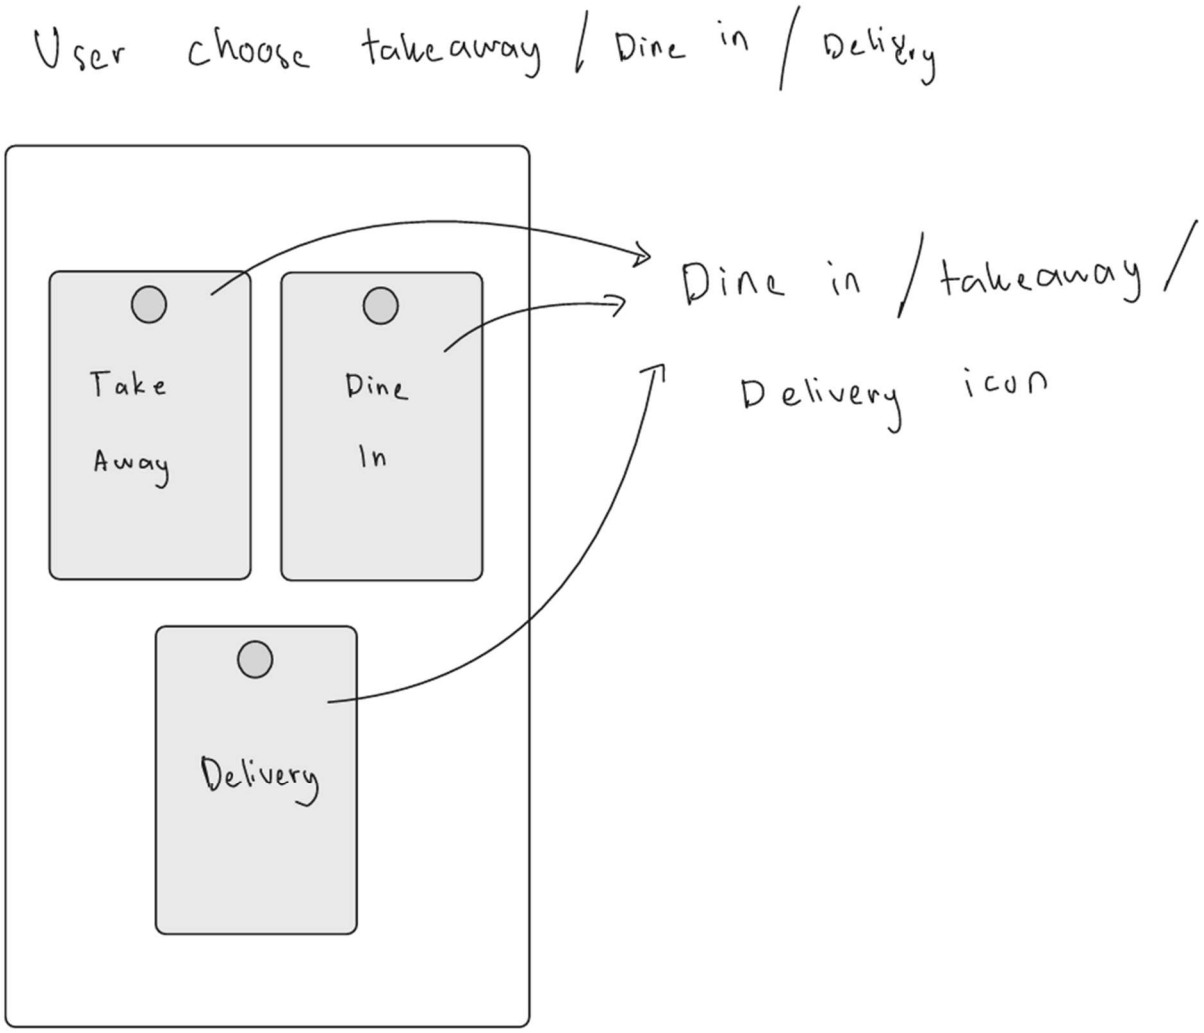

Proposed System Ideas	:	The Pizza Hut Pizzazz App will focus on developing a redesigned mobile application experience since many customers nowadays rely on smartphones to order food, track deliveries, and engage with brands. The application's UI will be visually appealing and easy to navigate, with minimal promotional clutter to keep the user focused while ordering. The features include a simplified ordering flow, unified order tracking across third-party platforms, a visual pizza builder, and fun gamified mini-games to earn loyalty points. The design will use clear icons, minimal buttons, and an intuitive layout so users of all ages — especially 18 to 40 — can navigate the application without assistance.
